

Silverleaf Desk

Improved system map · updated from the original 1–5s Excalidraw

Same drawing you had — Users and Admin still meet at “Adds 1 to 5’s” — cleaned up, numbered fully, and updated with department desks, the 9:30 a.m. auto-close, Thursday pulse, and the project manager desk.

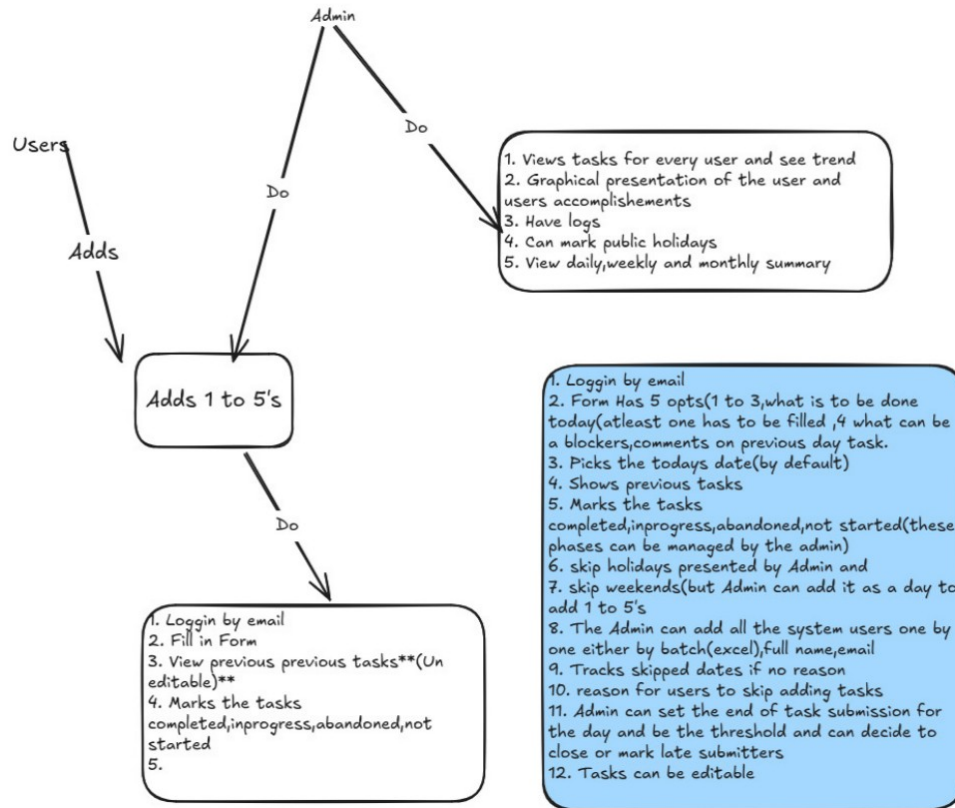

Staff file a personal 1–5. Admin can file one too, and also runs holidays, users, and the board.

Users — what staff do 1. Login by email (password or OTP). 2. Fill in the form — slots 1 to 3 for today. At least one must be filled. 3. View previous tasks. Older days are locked (uneditable for staff). 4. Mark tasks: completed, in progress, abandoned, not started. 5. Close the day in the evening, and read feedback on the desk. Each person’s 1–5 is personal (what they typed). It also sits on their department desk: Onboarding, Uniforms, Marketing, Operations, Data & Tech, HR, Academic, Finance, Facilities.	Admin — what admin does 1. Views 1–5s for every user, grouped by department. (Trend over time still to add.) 2. Graphical presentation of work: weekly snapshot with project %. (1–5 accomplishment charts still to add.) 3. Logs: user and tool audit exist. (1–5 activity log still to add.) 4. Can mark public holidays. Can add a weekend as an extra work day. 5. Daily board and weekly academy snapshot. (Monthly 1–5 summary still to add.) Admin also adds people (name + email). Spreadsheet / Excel batch import is still to add.	The form — original blue list, updated 1. Login by email. 2. Five parts: (1)(2)(3) what I will do today — at least one; (4) blockers; (5) how yesterday went. 3. Today’s date is used by default (Nairobi). 4. Shows previous tasks. 5. Marks completed / in progress / abandoned / not started. 6. Skips holidays set by admin. 7. Skips weekends, unless admin turns that date on. 8. Admin adds users one by one: full name + email. (Excel batch still to add.) 9. Skipped dates with no reason are marked missed at 9:30 a.m. 10. Staff must give a reason to skip. 11. Cutoff is 9:30 a.m. Nairobi. Late and missed are marked automatically — nobody checks the board by hand. 12. Today’s 1–5 stays editable until the day is closed.

The picture

Left: the original Excalidraw you sent. Right: the same map, improved and updated with desks, automation, pulse, and projects.

Original (what you gave)

Updated (what we have now)

What we added after the original drawing

9:30 a.m. Nairobi cron — nobody checks by hand

A job runs at 9:31 a.m. Nairobi.
Anyone who filed before 9:30 is on time.
Anyone who files after 9:30 is late.
Anyone with no 1–5 and no skip reason is missed.
Admins get an email digest.
The same cutoff applies to Thursday departmental pulses.

Thursday departmental pulse

Each department files three lines: wins, risks, help needed.
Due before 9:30 a.m. on Thursday.
Missed departments are flagged automatically.
This is the weekly check-in that sits next to 1–5s.

Project manager desk

Each department owns projects (ClickUp-style boards).
A project has phases, then sprints, then tasks.
Sprints have points, assignees, comments, checklists, attachments.
Tickets in Data & Tech can convert into project tasks.
Tech-tool checkout stays in Data & Tech.
Personal 1–5s can be filled from the person's open tasks.

Weekly academy snapshot

One page for Thursday (or any day).
Rolls up: department 1–5s, sprint progress, and pulse notes.
This is the weekly update the desks add up to.
Open it from My desk → Weekly snapshot.

Still to build (from the original picture)

Not in the system yet

1. Trend of a person's 1–5s over time.
2. Graphical presentation of user accomplishments (charts).
3. A 1–5 activity log screen.
4. Monthly 1–5 summary.
5. Excel / CSV batch import for users.
6. Admin-managed progress phases (the four statuses are fixed today).
7. Admin-configurable deadline (9:30 a.m. is hardcoded).
8. Date picker so staff can file a day other than today.
9. Free-text comments on yesterday (today we only store a progress mark).
