

# Welcome to the Curriculum Dashboard

*A Quick-Start Guide for Teacher*

---

Everything you need to teach with confidence — your Schemes of Work and Lesson Plans — lives in one place, and getting to them takes just a few clicks. Follow the steps below the first time you visit the dashboard and you will feel right at home.

## Step 1 — Select Your Grade

When the dashboard loads, you will see a row of grade buttons just below the top bar. Click the grade you are teaching and the dashboard will instantly display all the subjects assigned to that grade.

## Step 2 — Find Your Subject

Each subject appears as a card. The card header shows the subject name and the term it belongs to. If you are looking for something specific, use the Term or Subject dropdowns to narrow things down, or type a keyword into the Search box — the dashboard will filter in real time.

## Step 3 — Open the Scheme of Work

At the top of every subject card is a Scheme of Work button. Click it and your browser will open the full scheme document in a new tab. If the button appears greyed out, the scheme has not been linked yet — check back soon or reach out to your Head of Department.

## Step 4 — Open a Lesson Plan

Below the Scheme of Work you will find numbered lesson chips — one for each lesson in that unit. Simply click the lesson number you need and the corresponding lesson plan will open in a new tab, ready for you to read, print, or use during your lesson.

## Step 5 — Check the Big Picture

At the top of the page, toggle from Lessons to Overview. This gives you a bird's-eye view of how much of the curriculum has been linked across all grades — useful for understanding where resources are still being added.

**One Last Tip** The dashboard reads live from the curriculum spreadsheet. If you ever feel the content looks outdated, hit the Refresh button in the top-right corner and it will pull the very latest data.

*That is all there is to it. If anything is unclear or a link is missing, flag it with your Head of Department so it can be updated for everyone.*
